

## COVIREVAC, the French platform for testing vaccine candidates

### **A one-stop access to the French expertise in vaccinology and to a pool of 25,000 Volunteers for Large-Scale Clinical Trials**

International research is being mobilized in order to develop safe and effective vaccines for COVID-19.

At the request of the French government, France – drawing on the excellence of its clinical research in vaccination – has taken steps to help evaluate the most promising vaccine candidates with the deployment of the [COVIREVAC platform](#) [1].

Managed by [Inserm](#) [2] with the operational help of F-CRIN, COVIREVAC federates 24 Clinical Investigation Centers (CICs) located in university hospitals across France, in close collaboration with the [College of Teachers in General Practice](#) [3] (General Practitioners Teaching Association) and its 11 000 members. It also involves a network of clinical immunological research labs to ensure immunomonitoring capabilities throughout the trials. The clinical operational aspects of the various university hospitals are coordinated by the [Paris Hospital Group AP-HP](#) [4].
