

F-CRIN approval

Scientific excellence and international positioning

F-CRIN is a distributed clinical research infrastructure with 18 operational components of excellence:

- 12 disease-specific “investigation networks”
- 3 “networks of expertise”
- 2 “platforms”
- 1 national coordination unit

These components were identified, appraised and labeled following an evaluation process by an international Scientific Council on selective specifications with a view to measuring their:

- durability and degree of structuring,
- capacity to provide medical and scientific expertise, and
- capacity to lead and support clinical trials.

The F-CRIN approval is :

A recognition of **quality and performance** in the design, support and execution of **clinical trials**.

A guarantee of **scientific excellence** through the association of opinion **leaders and renowned experts**, strong operational capacity and the potential for **international positioning**.
